

Markdown Rendering Test

This document tests Markdown rendering and PDF generation in mdhelp.

1 Headings

Level 2 Heading

Level 3 Heading

Level 4 Heading

2 Paragraphs

This is a normal paragraph used to test line wrapping and paragraph spacing.

This is another paragraph to verify spacing between paragraphs.

This paragraph contains **bold text***italic text* , and **bold with***italic* **inside**.

3 Inline Code

Example of inline code:

Use the command `package require tablelist_tile`.

Another example:

```
dict get $item name
```

4 Code Blocks

Example Tcl code:

```
proc hello {} {  
    puts "Hello World"  
}
```

More complex example:

```
try {  
    set data [read $fd]
```

```
} on error {msg opts} {  
    log::error $msg  
    return -options $opts $msg  
}  
} finally {  
    close $fd  
}
```

5 Lists

Unordered List

- first item
- second item
- third item

Nested list:

- item
- item

Ordered List

1. first
 2. second
 3. third
-

6 Tables

6.1 Simple Table

Name	Age	City
Alice	30	Berlin
Bob	41	Hamburg
Carol	25	Munich

6.2 Table with Long Cell Content (Wrap Test)

The following table has cells with long text that must wrap within the column.

Parameter	Description	Default
-fontsize	Font size in points used for all body text in the generated PDF document	11
-margin	Page margin in PDF points applied uniformly to all four sides of every page	50

Parameter	Description	Default
-pagesize	Paper format for the output document, one of: A4, A5, Letter, Legal, or any custom WxH specification	A4
-title	Document title embedded in the PDF metadata and optionally displayed in the page header of the document	(empty)
-landsc...	Rotate the page to landscape orientation, so width and height are exchanged	0
-toc	Generate a table of contents at the beginning of the document from all heading levels 1 through 3	0
-header	Header template string shown at top of each page, %p is replaced by the current page number	(empty)
-footer	Footer template string shown at bottom of each page, %p is replaced by the current page number	Page %p

6.3 Table with Mixed Alignments

Product	Price	Stock	Notes
Widget A	12.50	100	Standard model, available in red, blue, and green
Widget B	24.99	42	Pro version with extended warranty
Widget C	8.00	500	Economy model, single color only
Special Bundle	199.00	5	Includes all variants plus accessories and manual

6.4 Headerless Table

proc	_renderBlock	Main render loop, dispatches by block type
proc	_renderStyledLine	Renders one line with mixed bold/italic/code segments
proc	_wrapStyledSegments	Word-wrap a list of styled segments to maxW
proc	_drawTableHeader	Draw header row with wrapping, returns new y
proc	_drawTableVLines	Draw vertical column lines for one page segment
proc	_tablePageBreak	Page break inside table, repeats header if present

6.5 Large Table (Page Break Test)

This table has enough rows to force a page break. The header should be repeated on the continuation page, and the vertical lines must be drawn correctly per page segment.

Nr	Command	Namespace	Since	Description
01	proc	::tcl	7.0	Define a named procedure with arguments
02	namespace eval	::tcl	8.0	Create or enter a namespace
03	namespace ensemble	::tcl	8.5	Create ensemble command from namespace
04	package require	::tcl	7.5	Load a package by name and version

Nr	Command	Namespace	Since	Description
05	package provide	::tcl	7.5	Declare the name and version of a package
06	source	::tcl	7.0	Read and evaluate a Tcl script file
07	uplevel	::tcl	7.0	Execute script in a different call frame
08	upvar	::tcl	7.0	Link variable to a variable in another frame
09	variable	::tcl	8.0	Declare namespace variable
10	set	::tcl	7.0	Assign or retrieve a variable value
11	unset	::tcl	7.0	Delete one or more variables
12	array get	::tcl	7.4	Return array as flat key-value list
13	array set	::tcl	7.4	Initialize array from flat key-value list
14	array names	::tcl	7.4	Return list of matching array keys
15	dict create	::tcl	8.5	Create a new dictionary value
16	dict get	::tcl	8.5	Retrieve value from dictionary by key
17	dict set	::tcl	8.5	Set value in dictionary, returns new dict
18	dict exists	::tcl	8.5	Test whether key exists in dictionary
19	dict keys	::tcl	8.5	Return list of all keys in dictionary
20	dict for	::tcl	8.5	Iterate over dictionary key-value pairs
21	lappend	::tcl	7.0	Append elements to a list variable
22	lindex	::tcl	7.0	Retrieve element from list by index
23	linsert	::tcl	7.0	Insert elements into a list at given index
24	llength	::tcl	7.0	Return number of elements in a list
25	lrange	::tcl	7.0	Return sublist between two indices
26	lsearch	::tcl	7.0	Search list for matching element
27	lsort	::tcl	7.0	Sort list with configurable options
28	lreplace	::tcl	7.0	Replace elements in list at index range
29	string length	::tcl	7.0	Return number of characters in string
30	string index	::tcl	7.0	Return character at given position
31	string range	::tcl	7.0	Return substring between two indices
32	string map	::tcl	8.1	Replace substrings using mapping list
33	string match	::tcl	7.0	Glob-style pattern matching
34	regexp	::tcl	7.0	Regular expression matching
35	regsub	::tcl	7.0	Regular expression substitution
36	format	::tcl	7.0	Format string like C printf
37	scan	::tcl	7.0	Parse string like C scanf
38	expr	::tcl	7.0	Evaluate mathematical expression
39	incr	::tcl	7.0	Increment integer variable by delta
40	if	::tcl	7.0	Conditional execution with elseif and else

Nr	Command	Namespace	Since	Description
41	switch	::tcl	7.0	Multi-branch conditional dispatch
42	while	::tcl	7.0	Loop while condition is true
43	for	::tcl	7.0	C-style loop with init, test, step
44	foreach	::tcl	7.0	Iterate variable over list elements
45	break	::tcl	7.0	Exit innermost loop immediately
46	continue	::tcl	7.0	Skip remainder of current loop iteration
47	return	::tcl	7.0	Return from procedure with optional value
48	error	::tcl	7.0	Raise an error with message and info
49	catch	::tcl	7.0	Catch errors and return result code
50	try	::tcl	8.6	Structured exception handling with on/trap

7 Blockquotes

This is a blockquote.

It should be indented and visually separated from normal text.

8 Horizontal Rules

Below this line should be a horizontal rule.

Text continues after the rule.

9 Tree Structures

Filesystem tree example:

```
project/
|- app/
|  +- main.tcl
|- src/
|  |- model/
|  |- actions/
|  +- ui/
+- lib/
```

10 Long Text

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed non risus. Suspendisse lectus tortor, dignissim sit amet, adipiscing nec, ultricies sed, dolor.
Cras elementum ultrices diam. Maecenas ligula massa, varius a, semper congue, euismod non, mi.

11 Mixed Formatting

This line contains **bold**, *italic*, inline code, and a link:
<https://example.com>

12 Special Characters

Characters to test UTF-8 handling:
ä ö ü ß Ä Ö Ü € £ ¥

13 Large Code Block

```
namespace eval ::app::model {  
    proc newItem {} {  
        return [dict create id "" name "" created ""]  
    }  
    proc validateItem {item} {  
        if {[dict get $item name] eq ""} {  
            error "Name required"  
        }  
        return $item  
    }  
}
```

14 Copy Paste Test

The following text must be selectable in the PDF.
Example command:

```
tclsh main.tcl --test
```

15 Page Break Test

Content before page break.

Content after page break.

End of Document
